

Our Rock Project™
Kids Teaching Kids

Dear Parent or Guardian,

Your child's class is about to embark on an amazing journey of discovery by participating in the Our Rock Project. Under the guidance of their teacher the children will team up and choose a STEM (Science, Technology, Engineering, Math) topic or social issue that is important to them. Then they will independently research their chosen subject, find a local professional working in that field, interview them and then write, edit and produce their own short 4-6 minute film.

Once the students have completed their productions, they can share their work with other students in classrooms around the world in our video library. You can learn more about the Our Rock Project on our website: ourrockproject.org. Be sure to visit the Parent's Page and our Library page where you can watch some of the films that students have produced.

The Our Rock Project is a 501.c.3 non-profit organization. Participation is completely free and our video library is always free to visit and watch the student films. It is also important to note that the copyrights to all student films remain with the students themselves, their parents and the school. We have no claims on the ownership of the films, but rather operate as a facilitator of the film productions and as an archive for the finished works.

If you would like to help us spread this revolutionary education program to more schools around the world, please visit our site and click on the donate tab at the top of the page. If you have any questions or would like more information about the Our Rock Project, please do not hesitate to contact your child's teacher or the school. You can also contact us directly via our email address below or on our web site contact page. We hope you will approve your child's participation in the Our Rock Project and look forward to seeing the stories your child and their classmates produce.

Sincerely,

Michael Van Laanen
Founder & CEO
